GEMINI 4 ARGON READINESS CHECKLIST

Prepare your prompts and workflows now so you can switch the moment public access opens

CHECKS	DO FIRST	PARTS	COST
13	3	4	Free

PREPARED BY
Hamza Jameel
10+ yrs · $5M+ ad spend managed · 150+ page-one rankings

Google has announced Gemini 4 Argon, calling it its most capable model yet. Access is rolling out in stages, starting with trusted cyber defenders, so most marketers and business owners cannot use it today. This checklist tells you exactly what Google has said about access, and what to do right now so you are ready to move fast once it opens up to you.

ON THIS SHEET

1	What changed	3 CHECKS
2	Check your current access and eligibility	3 CHECKS
3	Prepare your prompts and workflows while you wait	5 CHECKS
4	Set expectations internally	2 CHECKS

PART 1 OF 4 — 3 CHECKS

What changed

- [ ] 1.1

Google announced Gemini 4 Argon, its next frontier AI model

Google DeepMind SVP and chief AI architect Koray Kavukcuoglu described it as delivering frontier performance in complex workflows across real-world software engineering, enterprise knowledge work like legal and finance, and cybersecurity defense.

- [ ] 1.2

Access is being limited at launch to trusted cyber defenders

Google is first giving access through its Fairwind Program, aimed at trusted cyber defenders, rather than opening the model to the general public right away.

- [ ] 1.3

Paid API access and Google AI Ultra subscribers will come after, with no date set

Google has stated these groups will get access in a later stage, but has not announced a timeline for when that will happen.

PART 2 OF 4 — 3 CHECKS

Check your current access and eligibility

- [ ] 2.1 DO FIRST

Confirm whether you or your organization qualify for the Fairwind Program

This is the only route to Gemini 4 Argon right now, and it is specifically for trusted cyber defenders, not general marketers or businesses. If your work is not in cybersecurity defense, you will need to wait for the later API or Google AI Ultra rollout.

- [ ] 2.2

Check your Google AI Ultra subscription status

Google has named Google AI Ultra subscribers as a group that will get access after trusted cyber defenders. Having an active subscription in place now means one less step to complete once access opens.

- [ ] 2.3

Identify who on your team would use paid API access

Google says paid API access is coming after the initial trusted cyber defender stage. List which developers or workflows would need API keys so you can move quickly once applications or access open.

PART 3 OF 4 — 5 CHECKS

Prepare your prompts and workflows while you wait

Do this work now in your current model so you can transfer it directly once Gemini 4 Argon is available to you.

☐ 3.1 DO FIRST

Write down your highest-value use cases in plain language

List the specific tasks where more capability would matter most to you, such as complex legal or finance document review, or multi-step software engineering tasks, since these are the areas Google highlighted for this model.

☐ 3.2

Draft and save your core prompts as reusable templates

Keep a plain text document with your best prompts written out in full, with placeholders for details that change each time, so you can paste them into Gemini 4 Argon without rewriting them from scratch.

COPY THIS

```
You are helping me with [task type, e.g. contract review]. Here is the context: [paste document or background]. Please [specific instruction, e.g. summarize the key obligations and flag any unusual clauses]. Format your answer as [bullet points / table / short paragraphs].
```

☐ 3.3

Document your current workflow steps and tools

Write out, step by step, how a task currently gets done and which tool handles each step. This makes it easy to see exactly where a more capable model could replace or speed up a step later.

☐ 3.4 DO FIRST

Note the specific complex workflows you want to test first

Google specifically mentioned software engineering, enterprise knowledge work like legal and finance, and cybersecurity defense as strengths. If your business touches any of these areas, write down one real example task from each to use as a first test once you have access.

☐ 3.5

Set a reminder to check Google's official channels for access updates

Since no date has been given for API or Google AI Ultra access, check Google's official announcement pages periodically rather than relying on third-party claims about availability.

PART 4 OF 4 — 2 CHECKS

Set expectations internally

☐ 4.1

Tell your team this is a staged rollout, not a general release

Be clear with colleagues or clients that only trusted cyber defenders have access right now through Google's Fairwind Program, so no one wastes time trying to sign up for general public access that does not yet exist.

☐ 4.2

Frame this as the standard your work will eventually be measured against

This is the model you will eventually be measured against, so the businesses who get early access first will have a head start in learning its strengths. Use the waiting period to prepare rather than to assume nothing has changed.
